Software Proposal Document for Project Java Android App

Abdulla Nasser El Metwally

Supervised by: Eng. Nada El Madah

March 23, 2022

Abstract

The main goal of this project is to create easy Android app to help managing tasks through To-Do list.

1 Introduction

This is **Keep** project, where I try to solve a problem that faces many people to organize tasks to help them be more productive in their life or in their career.

2 Project Tools

2.1 Technologies Used

- **Java** : Main used programming language.
- **Android Studio** : Provides the fastest tools for building apps on every type of Android device.
- **NetBeans** : Main used free IDE and open source integrated development environment for application development.
- **Git** : The most widely used modern version control system in the world today.

3 Project Description

Android app to manage tasks with ease of use and provide more functionality.

4 Project Management and Deliverable
